DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/17/06 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1, 5-7, 18, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Estay (5,492,220) in view of Jones et al. (5,174,965) and Bovee (2,372,930).

Estay shows a device for the collection of a urine specimen comprising an integrally formed holder having a central extension member (12) of a constant thickness, a cup holder portion (20), and a handle (28). The holder is broadly disclosed as being capable of being made of plastic, metal, or various other materials with at least the cup holder portion (20) being slightly flexible (see col. 4, lines 36 and 37).

The patent to Jones et al. shows an embodiment in Figures 9-11 comprising a bendable cup holder (140) for releasably supporting a urine specimen cup (142) with lid (151).

Bovee shows a tool formed of bendable wire (1) that can be bent as desired but retains its bent shape until manually bent to a different position.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to form the entire central extension member (12) and cup hold portion (20) of Estay's device out of a bendable material, such as soft metal wire, as taught by Bovee so that a user could bend the device into a position to accurately locate a held cup in a desired area. It also would have been obvious to hold a plastic specimen cup with lid in the modified Estay device similar to that (142,151) shown in the Jones et al. patent in order to safely contain the specimen once collected.

In response to applicant's remarks, the resulting central extension member of the modified Estay device would retain its constant thickness but would be bendable along its length similar to the inherent characteristics of a thin metal wire or rod made of a light weight metal as is shown old and well known in the Bovee patent.

Allowable Subject Matter

2. Claims 2, 3, and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
3. Claims 9, 12-17, 20, 21, 23, and 24 are allowed.
